

WEEK 4

**DATA VISUALIZATION
& DASHBOARDING**

Superstore Sales Dashboard

AnalystLab Africa — Batch B Internship Program

June 2025 — Analyst: Adekoya Kikelomo Akorede

Tool: Superstore Dataset (Kaggle) • 2014–2017

Dataset Overview

9,994

Total Records

Orders 2014–2017

793

Unique Customers

Across 4 US regions

49

US States covered

Continental + Hawaii

4

Years of data

2014, 2015, 2016, 2017

Key columns in dataset

- Order ID, Order Date, Ship Date
- Ship Mode, Customer ID, Customer Name

- Segment, Country, City, State
- Region, Product ID, Category

- Sub-Category, Product Name
- Sales, Quantity, Discount, Profit

Business Problem

What the business needs to know:

1. Which region drives the most profit?
2. Which product categories underperform?
3. What seasonal sales patterns exist?
4. Which customer segments are most valuable?
5. Where are discounts hurting margins?

Dashboard Goal

Enable decision-makers to monitor KPIs, identify profit drivers, and spot underperforming products — at a glance, with interactive filters.

KPIs Defined

Key Performance Indicators tracked in the dashboard

Total Revenue

\$2.30M

Sum of all sales 2014–2017

Total Profit

\$286K

Net profit across all orders

Profit Margin

12.5%

Profit ÷ Revenue

Total Orders

9,994

Unique order count

Top Region

West

\$108K profit — highest

Loss Sub-Cat

Tables

-\$17K — biggest loss-maker

Interactive Dashboard

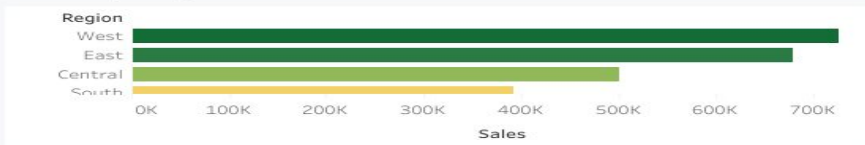

Superstore Sales Dashboard — 2014 to 2017 | Kikelomo Adekoya

Sales Trend

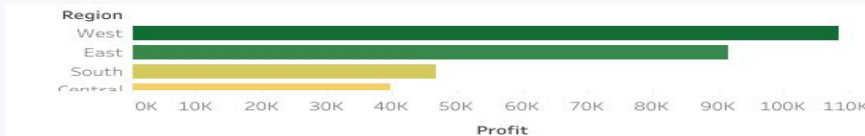

Sales by Region

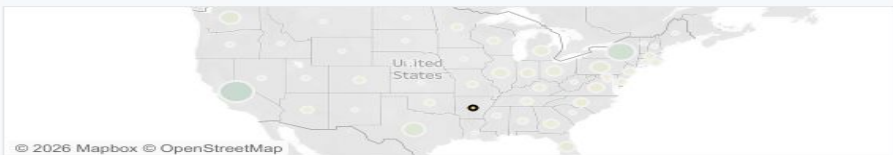

Category Performance

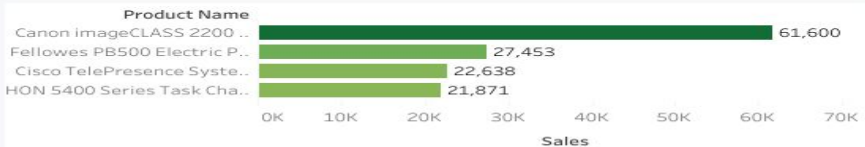

Profit by Region

Sales Map

Top Ten Product

Key Insights

What the data tells us

West dominates profit

The West region contributes \$108K profit — more than any other. Invest in scaling West operations.

Tech leads revenue

Technology (\$836K) is the top-selling category, but Office Supplies shows stronger profit margin.

Q4 seasonal spike

November–December consistently shows 2× the monthly average — ideal for promotional campaigns.

Tables are loss-makers

Tables, Bookcases, and Supplies sub-categories all report negative margins. Review pricing strategy.

Recommendations

Actionable next steps for stakeholders

01

Expand in the West & East

Allocate more marketing budget to the two most profitable regions. Run targeted campaigns to grow customer share.

02

Rethink furniture pricing

Tables and Bookcases are consistently loss-making. Increase prices, reduce discounts, or consider discontinuation.

03

Capitalise on Q4 demand

Build up inventory 6 weeks before November. Launch holiday bundles in Technology and Office Supplies.

04

Reduce discount leakage

Deep discounts erode margins by up to 60% in some sub-categories. Cap discounts at 20% and monitor impact.

Challenges & Learnings

Challenges faced

- Handling missing / null values in Order Date
- Choosing the right chart type for each metric
- Designing a clean layout without clutter
- Setting up slicers for multi-level filtering
- Making the dashboard accessible on smaller screens

What I learned

- Data cleaning is 60% of the analyst's work
- KPIs must be defined before building visuals
- Colour consistency improves readability
- Storytelling matters more than chart count
- Interactive filters add significant business value

Project Complete

Superstore Sales Dashboard — Week 4 Deliverable
